

## Business Quick Connect

Juniper Payments Business Quick Connect cash management system is an Internet based application that empowers business customers to generate, validate, approve and transmit ACH and wire transactions in a secure environment. This modular service offers convenience to businesses while providing increased revenue opportunities to community financial institutions and enhancing relationships between you, as the Correspondent FI, and your respondent customers.

Business Quick Connect is a powerful, user friendly system, that is more affordable than similar systems through other providers. Our solution is portal based and branded to the community FI. Most importantly, it integrates with the Correspondent Gateway service providing a seamless transaction flow from the business, to your customers, to you. Businesses can easily originate or import ACH payroll, loan payments, bill payments and EFTPS.

With wire transfer capabilities, Business Quick connect provides businesses the convenience of placing requests from their own computer. They will have the ability to create and submit wires, or choose previously saved wire templates to submit for upstream approval.

With the Administrative portal, your FI customer will have complete control of who, when, and how much origination access each user has of both ACH and wires including limits on dollar amounts per transaction. Your bank customer can also provide a variety of reports including Fed acknowledgements for each business originator.

Looking for FFIEC guidance compliance? Biometric Authentication integration is available to give your customers the security they need.

Enables  
a Better  
Experience

- Simplified transaction flow
- Modular services
- Easy and intuitive
- Affordable
- Branded as the deploying FI
